

# D44 AXLE SERIES

Dexter Axle is committed to supplying the industry with the best in trailer running gear innovations and product selection. Our new D44 Axle Series combines existing axle features and new engineering design to deliver a running gear package that offers value, strength, and durability for your trailer applications.

## BETTER BRAKING

- Reinforced 10 x 2-1/4" CSA-approved electric brakes with high performance magnets and specially formulated linings for true 4,400 lb. braking capacity.

## STRONGER DESIGN

- Constructed with a heavy duty, 6 on 5.50, 6-lug hub and 3" tubing for a stronger axle design than the D35 Series with 2-3/8" tubing.

## LARGER BEARING

- Utilizes a larger, more durable outer bearing compared to D35 axles. Uses standard industry bearings: Inner L68149, Outer LM67048.

## REDUCED WEIGHT

- A standard D44 axle with brakes weighs 30 lbs. less than a similar D52 axle, allowing for lightweight trailer design without sacrificing quality and performance.

## COST EFFECTIVE

- Adds value to your trailer by providing a rugged, more robust running gear package at a lower cost than D52 axles.

## WARRANTY PROTECTION

- Backed by Dexter's two-year limited warranty and supported with a full line of replacement parts and service kits.

## SPECIFICATIONS

- 4400 lb. Brake Axle
- 10 x 2-1/4" Electric Brakes
- 6 on 5.50 Hub-Drum
- 3" Tubing
- Straight Spindles Only
- E-Z Lube® Option Available
- 12" Minimum Overhang
- 19" Maximum Overhang
